

SOFTCAP

Prewired electrode cap

Description

The Softcap moduled cable-electrode connection ensures a high and constant quality of the recorded signal.

Electrode holder is designed for excellent patient comfort as it is made with soft and skin-friendly materials and it is easily removable.

- The connection between the electrode and the lead wire is totally overmoulded avoiding oxidation, increasing the product life and reducing the noise of the signal;
- Simple removal and cleaning of the electrode
- International 10-20 System.

Specifications

Environment

Electrode	AgAgCl (on request Tin, sintered AgAgCl or Gold) / LDPE
-----------	---

Electrode holder	Silicone
------------------	----------

Lead wire	CuZn/Au with PVC jacket
-----------	-------------------------

Headcap net	Lycra
-------------	-------

Packaging	PP
-----------	----

Biocompatibility (UNI EN ISO 10993)	Yes
--	-----

Latex	No
-------	----

Nickel	No
--------	----

Phthalates	No
------------	----

Generic code	CASXXXXXXX
--------------	------------

Electrode number	From 9 to 256
------------------	---------------

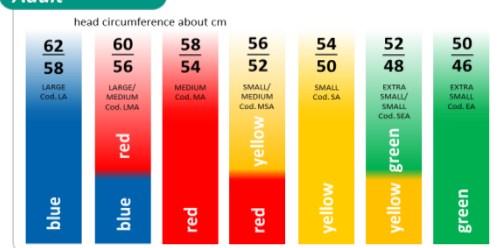

Recording Area	66 mm ²
----------------	--------------------

Connector	SUBD 25 (other connectors available on request)
-----------	---

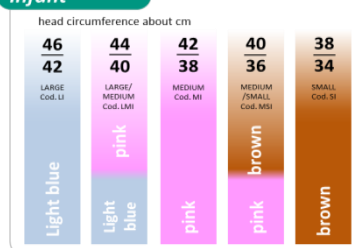

RoHS II	✓
---------	---

REACH	✓
-------	---

Adult

Infant

Neonatal
